AI LINKEDIN PERSONAL BRANDING SERIES PROJECT

An English portfolio by Harini

Eight LinkedIn drafts, visual concepts, planning, responsible AI review, and next steps

AI CAPSTONE PROJECT | HARINI

Profile Summary

A concise profile and goal statement for the project.

Profile: Harini is a student interested in Artificial Intelligence and Data Science. This project documents learning interests and a student-level content workflow; it does not claim professional experience or achievements.

Goal: Build a clear, authentic LinkedIn presence by sharing learning reflections and project work in Harini's own voice, with AI used only as a drafting and visual-support tool.

Intended audience: Students, recruiters, and professionals interested in AI and Data Science.

Skills shown in this project: Prompt writing, drafting and editing, visual communication, output review, privacy-aware content decisions, and calendar-based workflow planning. These describe project activities, not credentials.

> Personal facts, skills, and any public-facing profile details should be checked by Harini before posting.

Post 1 | Introduction

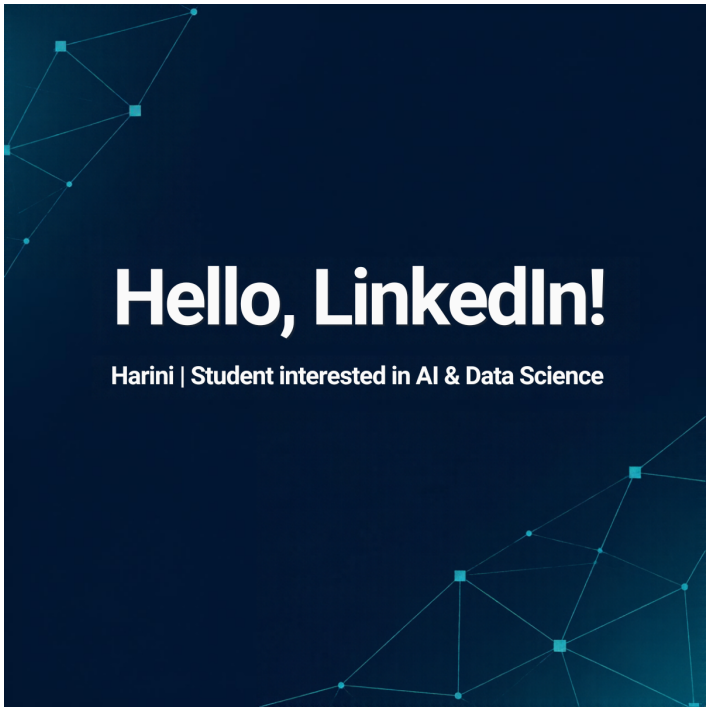

LinkedIn draft for Harini - review personal details and final wording before publishing.

I'm Harini, a student interested in AI and Data Science. I'm beginning to build my professional presence and share what I learn along the way.

In this series, I plan to share learning reflections, project ideas, and thoughts about using AI responsibly. I'm still learning, and I hope to keep improving one step at a time.

#AI #DataScience #StudentLearning

Visual 1 | Hello, LinkedIn!

Post 2 | Why I Am Interested in AI and Data Science

LinkedIn draft for Harini - review personal details and final wording before publishing.

AI and Data Science interest me because they connect technology, information, and problem-solving. As a student, I want to understand how these fields work and how they can be used thoughtfully.

I am taking this learning journey one topic at a time and sharing my progress here.

#ArtificialIntelligence #DataScience #LearningJourney

Visual 2 | Why AI & Data Science?

Post 3 | Learning One Concept at a Time

LinkedIn draft for Harini - review personal details and final wording before publishing.

A new technical topic can feel challenging at first. Breaking it into smaller ideas can make it easier to follow.

I try to learn one concept at a time, write down what I understand, and ask questions when something is unclear. I am still developing my knowledge, and every small step matters.

#StudentJourney #ContinuousLearning #AI

Visual 3 | Learn One Concept at a Time

Post 4 | My Capstone Project

LinkedIn draft for Harini - review personal details and final wording before publishing.

I am developing an AI LinkedIn Personal Branding Series as my capstone project. My plan is to prepare eight post drafts, create matching visuals, organise a posting calendar, and set up review reminders.

I review AI-assisted drafts and edit them so the final content is clear, honest, and appropriate to share.

#CapstoneProject #AI #ContentWorkflow

Visual 4 | A Simple Content Workflow

Post 5 | Using AI Thoughtfully

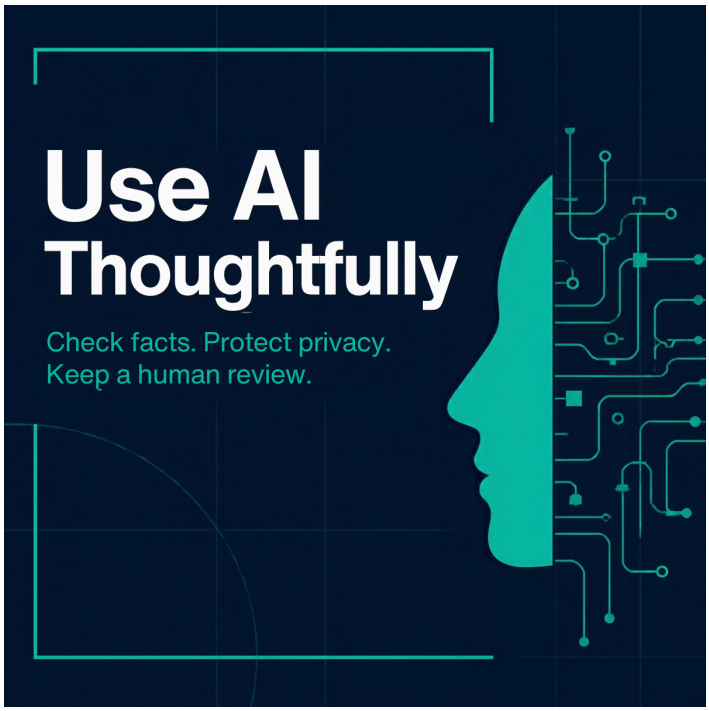

LinkedIn draft for Harini - review personal details and final wording before publishing.

AI can help me brainstorm and organise ideas, but I need to review its output before using it.

For this project, I use AI as a drafting assistant. I check claims, remove anything that does not reflect my experience, and make sure the final posts represent my own views.

#ResponsibleAI #AIForLearning #DigitalSkills

Visual 5 | Use AI Thoughtfully

Post 6 | Learning Through Teamwork

LinkedIn draft for Harini - review personal details and final wording before publishing.

Learning with others can bring different ideas and perspectives. Good teamwork depends on listening, clear communication, and respectful feedback.

As I continue learning, I want to stay open to collaboration and learn from the ways people approach a problem.

#Teamwork #StudentLearning #Collaboration

Visual 6 | Teamwork and Learning Together

Post 7 | My Content Creation Process

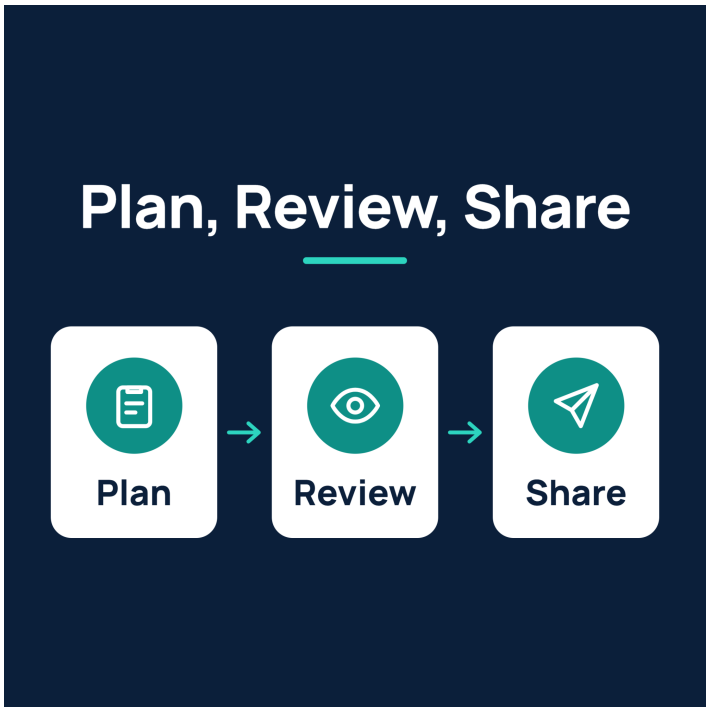

LinkedIn draft for Harini - review personal details and final wording before publishing.

A useful post needs more than a first draft. It also needs editing, fact-checking, and a clear visual.

For this LinkedIn series, I plan each post, review the wording, pair it with a simple visual, and organise the drafts in a calendar so the workflow is easy to follow.

#ContentCreation #LinkedIn #ProjectWorkflow

Visual 7 | Plan, Review, Share

Post 8 | Reflection and Next Steps

LinkedIn draft for Harini - review personal details and final wording before publishing.

This capstone is helping me think about how to present my learning in a clear and professional way.

I have reviewed all eight drafts and visuals and checked the calendar and reminder workflow. My next step is to present this project and continue documenting what I learn from using AI.

#Reflection #CareerJourney #AIProject

Visual 8 | Learning Journey & Next Steps

Posting Calendar and Reminder Workflow

Draft schedule; add actual dates and verify each calendar event.

Week	Day	Post
1	Monday	1 - Introduction
1	Thursday	2 - Why I Am Interested in AI and Data Science
2	Monday	3 - Learning One Concept at a Time
2	Thursday	4 - My Capstone Project
3	Monday	5 - Using AI Thoughtfully
3	Thursday	6 - Learning Through Teamwork
4	Monday	7 - Plan, Review, Share
4	Thursday	8 - Reflection and Next Steps

Reminder workflow

- Tool: Google Calendar (a calendar tool, not an AI tool).
- Trigger: one day before each planned post date.
- Review caption, visual, factual accuracy, privacy, and final wording.

Test evidence: a test Calendar event produced a browser notification five minutes before the test event. Harini reports that she also checked the eight post-review reminders and confirmed their schedule.

Prompt Library

English prompts adapted for a single-student project.

1. Draft the eight posts

Write eight concise LinkedIn post drafts for one student interested in AI and Data Science. Cover: introduction, interest in the field, learning one concept at a time, a capstone workflow, responsible AI use, teamwork as a general learning value, a content process, and next steps. Use a clear student voice. Do not invent personal experiences, skills, achievements, statistics, or facts. Suggest a few relevant hashtags. Label each result as a draft for human review.

2. Create a matching visual

Create a square LinkedIn visual for Harini about [topic]. Use a clean, professional navy, teal, and white design. Use only the exact heading and supporting text supplied here: [insert approved wording]. Keep text large and readable. Do not add names other than Harini, achievements, statistics, or extra claims.

3. Review a draft

Review this LinkedIn draft for unsupported facts, invented personal experience, privacy risks, unclear wording, spelling, and grammar. Quote the exact part that needs attention and suggest a minimal correction. Do not add new claims. Text: [paste one draft].

4. Research task - not yet documented as completed

Find two reliable, current sources that explain one beginner-level AI or Data Science concept suitable for a student LinkedIn post. Give the source title, publisher, date, and direct link. Separate sourced facts from suggestions, and do not invent citations. I will check every source and claim before use.

Research Source: NIST AI Risk Management Framework

A source-backed note about reviewing AI-generated content.

Research note

NIST explains that artificial intelligence can offer benefits, but it can also create risks. This supports my decision to review AI-generated content before using it in my LinkedIn posts.

Why it matters to this project

I used AI to help draft and create visuals. Before using the results, I checked that the wording reflects my own views, avoids unsupported claims, and does not expose private information.

Source

National Institute of Standards and Technology (NIST). *Artificial Intelligence Risk Management Framework (AI RMF 1.0), Executive Summary* (2023).

https://airc.nist.gov/airmf-resources/airmf/0-ai-rmf-1-0/

This is a short paraphrase of the Executive Summary. The source page was opened and checked for this project.

Verification and Responsible AI Review

The PDF records AI-assisted review; final human confirmation remains essential.

Review approach

The source project document records that Gemini reviewed the eight drafts and reported no clear unsupported-fact issue. Claude also reviewed Post 1 and found no unsupported facts, invented experience, privacy concerns, or spelling and grammar errors. Claude suggested an optional clarity edit: change 'This series will include' to 'In this series, I plan to share.' Harini has confirmed her personal details and reviewed the final wording and visuals. AI review is helpful, but it is not proof that every statement is correct; check the final post again before publishing.

Checks to complete for each post

- Confirm every first-person statement is true for Harini.
- Check spelling, grammar, and whether the visual matches the post.
- Remove private information and unsupported claims.
- Confirm the image is readable at LinkedIn size and has no accidental text.
- Save a final human-reviewed copy before publication.

Research and source check

The source PDF does not include a research log or source list. The eight drafts mostly describe interests and learning habits, but the capstone standard still asks for a research component. Add a short sourced fact or a source-backed concept note, then verify it independently and cite the source.

> Do not treat an AI reviewer's "no issue found" response as a substitute for human fact-checking.

Before and After, Tools, and Skills

Evidence stated in the source document, rewritten for Harini only.

Before AI assistance

The project topic and eight post themes had been planned.

After AI assistance

ChatGPT supported draft wording and visual ideas. Canva AI was used to create the visuals, Gemini reviewed the eight drafts, and Claude reviewed Post 1. The drafts and visual concepts were organised in Google Docs, with Google Calendar used for reminder planning.

What improved

The work is organised as eight post drafts with a matching visual concept for each and a four-week posting schedule. A measurable time or quality comparison is not included yet; record one if the course expects a stronger before-and-after analysis.

AI tools evidenced in the PDF

- ChatGPT - draft wording and visual ideas.
- Canva AI - visual creation.
- Gemini - review of the eight post drafts.
- Claude - review of Post 1 for accuracy, privacy, grammar, and clarity.

These are four AI tools documented for the project. Google Docs and Google Calendar are useful supporting tools, not AI tools.

AI skills demonstrated in project work

Prompt engineering; AI-assisted writing; image generation; editing for personal voice; output verification; responsible AI and privacy review; and productivity workflow planning. These project activities meet the six-skill threshold when documented and demonstrated.

Other course-wide capstone checks

- Live demonstration: not evidenced in this PDF; prepare a short walkthrough of the prompts, visuals, calendar, and review process.
- Calendar reminders: Harini reports that all eight post-review reminders have been checked.

Completion Checklist

What is documented and what still needs action.

Requirement	Status from this PDF
Profile summary and goals	Included; Harini-only wording
Eight post drafts	Included; reviewed by Harini
Matching visuals	Eight included; reviewed; Post 6 shows one learner
Posting calendar	Included as a four-week draft; dates not specified
Reminder workflow	Checked by Harini; reminders confirmed
Prompt library	Included
Verification / error analysis	Gemini reviewed 8; Claude reviewed Post 1; Harini checked all 8 posts and visuals
Before-and-after analysis	Included qualitatively; no time measurement recorded
Research component	NIST AI RMF 1.0 source note included and checked by Harini
Minimum four AI tools	Four documented: ChatGPT, Canva AI, Gemini, Claude
Minimum six AI skills	Several project skills listed; be ready to explain them
Live demonstration	Pending - present the project walkthrough

Remaining step

Prepare and present the live project walkthrough. Check with the lead whether the demo should be shown live or submitted as a recording.

Thank You

Harini | Learning one step at a time
